EDUCATION

York University

Honours Bachelor of Science in Computer Science

Toronto, ON

Sep. 2024 – Apr 2026

Sheridan College

Advanced Diploma of Software Development and Network Engineering

Oakville, ON

Sep. 2020 – Dec. 2023

PROJECTS

ASOC Investigator | FastAPI, Next.js, LangGraph, OpenAI, pgvector, VirusTotal, AlienVault, FalconSandbox

- Architected a **multi-agent LangGraph** using a supervisor agent that orchestrates ReAct specialist agents for investigation (threat-intel/sandbox tools), correlation (**pgvector RAG** + MITRE ATT&CK), and remediation (mock firewall actions) with an independent **LLM-as-judge** evaluator bounded to 3 revision loops
- Built a reversible **PII-masking** boundary so no LLM ever sees real data; values are unmasked only for validated tool calls and the final SOC report

Sentinel Detection Learning Platform | FastAPI, Next.js, LangGraph, OpenAI, pgvector, MS Learn MCP

- Built a **LangGraph** pipeline with first node using Supabase **pgvector RAG** and second node using **OpenAI** to produce personalized **KQL** rule usecase challenges
- Implement a **LangGraph StateGraph** evaluation pipeline: a **ReAct** agent (**OpenAI** + **MCP**) dynamically queries **Microsoft Learn** to evaluate user's **KQL** input, provide feedbacks and embeds session summaries into **pgvector**

EXPERIENCE

Cybersecurity Analyst

Bell Cyber

May 2026 – Aug 2026

Mississauga, ON

- Achieved **Microsoft SC-200, CCFA** certification
- Triaged and investigated security incidents using FortiSIEM, CrowdStrike EDR, Elastic and Microsoft Sentinel
- Created and fine tuned detection rules for Microsoft Sentinel

Software Engineer

Kevaris Autonomous Service

March 2026 – July 2026

Toronto, ON

- Built telemetry **API** and implemented unit tests for the telemetry service, integration tests for **REST** endpoints, and performance benchmarks for telemetry queries, achieving **100%** coverage across the telemetry module
- Built a real-time analytics dashboard in **React/TypeScript** using reusable components

Software Developer

SIRT

May 2023 – Aug. 2023

Toronto, ON

- Debugged and extracted a **10K+** entries data set using **Python**, reducing asset integration time by **25%**
- Integrated processed data and prototyped gameplay features in **Unreal Engine** using **C++**

Software Developer

Cloud DX

Jan. 2022 – April 2023

Oakville, ON

- Developed the transformation and visualization layer of a **C#** data pipeline from Arduino to Microsoft HoloLens
- Led registration workflow implementation, debugging a critical input rendering bug within **24 hours** and accelerating component integration by **50%**
- Integrated **Azure** Face API for facial recognition with persistent user identification, improving responsiveness by **20%**
- Conducted system integration and testing for live demonstration at **Avatar XPrize 2022**

TECHNICAL SKILLS

Languages: Java, Python, C#, C++, JavaScript, TypeScript, SQL

Frameworks: FastAPI, React, Spring, ASP.NET, Next.js, Node.js, Flask

AI/ML: numpy, pandas, scikit-learn, OpenAI, Gemini, Tavily, Pinecone, LangGraph

Databases: Supabase, MongoDB, MS SQL

Tools: Git, Docker, Vercel, Google Cloud Platform, Clerk

Security: Microsoft Sentinel, Elastic, FortiSiem, CrowdStrike EDR
